

Emerson Flow On-Site Calibration Services

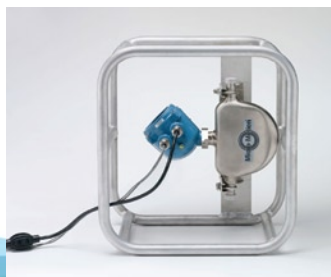

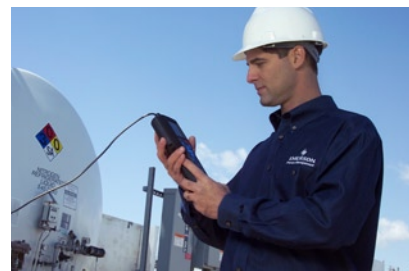

Expert support for optimal Coriolis flow and density meter performance

Trying to keep instrumentation in compliance with internal quality guidelines and/or external regulatory agency requirements?

Is your process not performing as expected?

Expert Emerson field calibration services provide more than calibrations and can offer insight into your process to maximize your operation. These factory certified field service technicians deliver maintenance, repair and personalized training for world-leading flow and density measurement devices that keep your plant running at its peak. Count on the confidence that comes from unmatched lifecycle management services from Micro Motion.

- Expert, on-site calibration services
- Fast service and quick calibration turnaround
- Long-term partnership with Emerson
- Factory certified technicians diagnose and verify calibration against factory specifications
- Calibration documentation provided for your records
- Calibrated using factory calibration, NIST-traceable Micro Motion Coriolis reference meter
- Minimizes equipment downtime
- Calibration for Coriolis liquid flowmeters up to 3-inch line size.
